ABSTRACT

This book is designed for middle school earth science or general science teachers to help their students learn scientific literacy through event-based science. Unlike traditional curricula, the event- based earth science module is a student-centered, interdisciplinary, inquiry-oriented program that emphasizes cooperative learning, teamwork, independent research, hands-on investigations, and exploration of authentic tasks. Students use this book to work in cooperative teams, playing the roles of mining production/operations manager, mining engineer/geologist, chemist, and environmental hazards manager to gather information about particular mines in Nevada. The module in this book can be used to build a whole curriculum or fit into current lesson plans to add interest. (KHR)
